RENZIL RODRIGUES

Technical Architect · Automation & Applied AI · Systems Builder

Bengaluru, India • +91 7259540700 • renzil.digispec@gmail.com • linkedin.com/in/rien-zi • github.com/rien-zi • rien-zi.aexis.space

PROFILE

> *My engineering work starts with understanding the people and processes behind a system. I connect business workflows, data, interfaces and infrastructure, then build the software that makes them work together.*

PROFESSIONAL EXPERIENCE

Assistant Manager, Process Automation & Control Tower

Swiggy | Apr 2026 — present

Engineering ownership with an additional remit for real-time operational monitoring and escalation handling.

- Evaluate inefficient systems, broken pipelines and scattered data sources.
- Continue architecture, backend, automation and applied AI work alongside Control Tower responsibilities.

Lead Process Automation Engineer

Swiggy | Nov 2024 — Apr 2026

Expanded from individual automation work into architecture and end-to-end system ownership.

- Design backend services, operational software and data-driven workflows.
- Integrate AI and retrieval into practical production systems.

Process Automation Engineer

Swiggy | Oct 2023 — Nov 2024

Built the software connecting operations, APIs, databases, analytics and AI/NLP.

- Develop automation pipelines and backend integrations.
- Build operational interfaces, reporting and analytics workflows.

Assistant Team Lead, Training & Content

Swiggy | Oct 2022 — Oct 2023

The bridge from training and content leadership into software, automation and analytics.

- Work across training, content and operational enablement.
- Translate recurring workflow problems into automation opportunities.

Senior Training Specialist

Swiggy | Sep 2020 — Oct 2022

Built a foundation in understanding users, processes and operational knowledge.

- Support training, knowledge management and learning-platform workflows.
- Work on an LMS serving a reported 5,000+ users.

TECHNICAL FOCUS

Backend & Integration: Node.js, TypeScript, Python, PHP, REST APIs, webhooks, queues, retries and idempotency.

Data & Applied AI: PostgreSQL, MySQL, MongoDB, Snowflake, Redis, RAG, hybrid retrieval and cited answers.

Interfaces & Delivery: React, Next.js, TailwindCSS, AWS EC2/S3, Docker, NGINX, CI/CD and observability.

SELECTED SYSTEMS

Resolute

Active Platform

Architecture, automation & platform development

A customer-resolution platform that connects agent workflows, operational data, integrations and accountable automation.

- Connected operational dashboards, authorized workflows, APIs and automation; modernized the existing PHP backend as part of Resolute.
- Self-reported scope: 8,000+ daily users, 150,000+ classified emails/day at approximately 98% accuracy, and 120,000+ screened interactions/day.

Middleware Integration

Shipped / Active

Backend Lead

An event-driven workflow engine connecting SaaS, webhooks and internal tools through queues and reliable background execution.

- Webhook ingestion → queue → background workers → payload transformation → persistence and notification dispatch.
- Designed retry handling, idempotency checks and separate background handlers for reliable execution.

RAG & Document Intelligence

Shipped / Production

Full-Stack Architect & Core Developer

Document ingestion and grounded retrieval that connect useful answers to inspectable source references.

- Document parsing and indexing, hybrid retrieval with metadata filters, and answers grounded in cited sources.
- Used structured outputs, deterministic logic and human review where the workflow calls for accountability.

Campaign Management

Deployed

Workflow Design & Engineering

A no-code campaign workflow that turns a brief into an HTML email, then supports review, revisions, preview tests and scheduling metadata.

- No-code brief-to-HTML workflow using an AI API, follow-up or manual revisions, ImageKit/S3 assets and content-intent checks.
- Approval and test-email review before storing audience, priority and schedule metadata.
- Self-reported since deployment: campaigns reaching 350,000+ people across multiple campaigns and a 14% increase in click or interaction rate.

ADDITIONAL REPORTED OUTCOMES

- RAG-assisted resolution of approximately 13,000 email queries with human review and deterministic logic.
- Average handling time improved from 10–15 minutes to 3–4 minutes; resolution turnaround from 24–48 hours to 4–8 hours.

Figures are self-reported and not independently audited. Campaign reach is across multiple campaigns; the basis of the 14% click/interaction increase has not been specified. Savings estimates are not combined into a single total.

EDUCATION & CONTINUING LEARNING

Bachelor of Commerce — St. Aloysius College, Mangaluru · 2018

Advanced Prompt Engineering Techniques — LinkedIn · 2024

Career Essentials in Data Analysis — Microsoft · 2024

Approach: understand the workflow, own the full lifecycle, keep AI accountable, and modernize established systems with care.
